## 3 VimbaGigETL - Overview

The VimbaGigETL (Vimba GigE Transport Layer) transports the data from the network card to an application. It is a module according to the GenTL specification and complies to GenICam applications providing a GenTL consumer interface. It consists of several parts: the functional interface and the feature maps for the transport layer and for the camera.

The **functional interface** is needed for dynamically controlling GigE cameras and it covers the functionality described in [GenTL specification 1.3](#). There is additional functionality, which is described in chapter 8, **Vimba extensions to the functional GenTL interface**.

The **features** exposed by XML files are GenAPI-conforming features described in the locations:

- Features of the GenTL **System module** in chapter 4. The System is a module for handling multiple GenTL Interfaces in one transport layer.
- Features of the GenTL **Interface module** in chapter 5. The Interface is a module for handling multiple GenTL Devices.
- Features of the GenTL **Device module** in chapter 6. The Device module is a host-side representation of the Camera aka "Remote Device".
- Features of the GenTL **Data Stream module** in chapter 7. The Data Stream module allows handling all streaming-related operations.
- Camera (**Remote Device**) features in [GigE\\_Features\\_Reference.pdf](#).

The **configuration file**, which is named VimbaGigETL.xml (according to the name of the VimbaGigETL.cti), must be located in the same directory as the Transport Layer file. The configuration options are described in the comments of the file itself.

## 8 Vimba functional extensions to GenTL

This chapter includes:

8.1	Custom Transport Layer events . . . . .	64
8.1.1	Additions to EVENT_TYPE_LIST . . . . .	64
8.1.2	Additions to EVENT_DATA_INFO_CMD_LIST . . . . .	64
8.1.3	Additional enumeration IFCHANGE_WHAT_LIST . . . . .	64
8.2	Additional URL information . . . . .	65
8.2.1	Additions to URL_INFO_CMD_LIST . . . . .	65

Vimba transport layers provide additional functionality to the general GenTL interface. The provided extensions to Transport Layer Events allow monitoring system changes. Other extensions allow comfortable access to additional URL information.

## 8.1 Custom Transport Layer events

Custom additions to the following Enumerations are available:

- EVENT\_TYPE\_LIST (used in GCRegisterEvent and GCUnregisterEvent)
- EVENT\_DATA\_INFO\_CMD\_LIST (used in EventGetDataInfo)

Additionally, an enumeration for determining the type of a change is provided: IFCHANGE\_WHAT\_LIST

These extensions allow the users of Vimba transport layers to get informed about changes to either the interface list or the camera list.

### 8.1.1 Additions to EVENT\_TYPE\_LIST

Listing 1: Event types

```
enum EVENT_TYPE_LIST_VIMBA
{
    EVENT_SYSTEM_CHANGE          = 1000, // System detected some change
    EVENT_INTERFACE_CHANGE       = 1001  // Interface detected some change
}
```

### 8.1.2 Additions to EVENT\_DATA\_INFO\_CMD\_LIST

Listing 2: Change Events

```
enum EVENT_DATA_INFO_CMD_LIST_VIMBA
{
    // for event type EVENT_SYSTEM_CHANGE
    EVENT_DATA_SYSTEM_IFCOUNT = 1000, // UINT32    Number of detected interfaces

    // for event type EVENT_INTERFACE_CHANGE
    EVENT_DATA_IFCHANGE_DUID    = 1001, // STRING    Device UID
    EVENT_DATA_IFCHANGE_WHAT    = 1002, // UINT32    Bitfield of what has changed
                                   // (IFCHANGE_WHAT_LIST)
    EVENT_DATA_IFCHANGE_DATA    = 1003  // UINT32    Bitfield of current state of
                                   // the device (IFCHANGE_WHAT_LIST)
};
```

### 8.1.3 Additional enumeration IFCHANGE\_WHAT\_LIST

Listing 3: Change Event options

```
enum IFCHANGE_WHAT_LIST
{
    IFCHANGE_WHAT_VISIBILITY    = 1,    // Device visibility has changed
    IFCHANGE_WHAT_REACHABILITY  = 2    // Device reachability has changed
};
```

## 8.2 Additional URL information

For the following Enumeration, extensions are available:

- URL\_INFO\_CMD\_LIST (used in GCGetPortURLInfo)

The extensions allow the user of the Vimba transport layers to access URL information without having to parse the URL string.

### 8.2.1 Additions to URL\_INFO\_CMD\_LIST

Listing 4: URL information

```
enum URL_INFO_CMD_LIST_VIMBA
{
    URL_INFO_FILENAME          = 1000,  // STRING    Filename of the port XML file
    URL_INFO_ADDRESS           = 1001,  // UINT64    Start address of the XML file
    URL_INFO_LENGTH            = 1002,  // SIZET     XML file length (in bytes)
    URL_INFO_ZIPPED            = 1003   // BOOL8     Is the XML file zipped
};
```
